Training description

This course covers the concepts and characteristics of AI (artificial intelligence) focusing on intelligent services in Korea. This course does not cover the advanced content of the technology, such as the detailed principles and deep learning. The course content includes cases of AI-applied public services for citizens, businesses, and government. In addition, the issues and measures when applying AI technology to public services are introduced.

For more information about the training objectives, target population, entry requirements, methodology, evaluation and content, consult the page here.
