Description

The course aims at providing an introduction to the main theoretical and empirical issues surrounding the economic analysis of innovation. In particular, the course will discuss how innovation emerges in modern economies and how it interacts with the dynamics and evolution of sectors. The course will examine alternative ways of conceptualizing innovation; the sources and procedures of innovation; the relationship between market structure and innovation; the trade-offs and dilemmas in terms of strategy and social welfare which characterize innovative environments. This course is an introductory course to students with a limited background in the innovation studies tradition. It uses simple microeconomic and industrial organization models as well as empirical and historical evidence on the evolution of industries and case studies.

Registration information

[Document on registration information \(English\)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals,

irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
