Price

$75.00

Description

This course is the first in a series of courses that focus on the design and implementation of smart cities. Many countries have sought to develop smart villages/towns/cities with varying degrees of success according to the penetration of broadband networking infrastructure capable of supporting the large amounts of data that need to be transmitted. This course provides an overview of aspects of smart city development to be considered. It focuses on the perspectives of the human element and the built environment, which includes buildings, street furniture, foliage, etc. Although it makes reference to more technical topics such as sensors and radiofrequency propagation, those will be the focus of a subsequent course.

Registration information

[Document on registration information (English)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
