Modality: Online self-paced
Dates: Open
Training fees: $0.00
Language: English
Registration deadline:

Training code: 24OS100313MUL-E
Contact: fanny.rotino@itu.int

Training description

Children, or everyone under the age of 18, make up an estimated one in three internet users globally. The digital world provides children with unprecedented opportunities, while also exposing them to online risks and harms that require dedicated efforts to understand and address. Governments, parents and caregivers, educators, civil society, and children and young people themselves all around the world have a role to play in shaping a safe and positive digital environment for children. As the providers of digital products and services, the actions of businesses are also a critical component of these efforts. Every business has a responsibility to respect children's rights in the digital environment and can seize opportunities to support child rights and well-being through their activities. This e-learning training course for industry, developed by the ITU and UNICEF, includes four modules spanning foundational child rights and business issues and knowledge on the digital environment. If your company develops or deploys digital technologies, these modules will support you to better understand how child rights intersect with your company's responsibilities, potential risks and harms for children to think about in your daily operations, and ideas of where to go next on your child rights journey. This training course was developed in collaboration with UNICEF.

For more information about the training objectives, target population, entry requirements, methodology, evaluation and content, consult the page here.

How to register

In order to register for the training, participants should:

1. Create an ITU Academy account here
2. Register for the course here

The ITU Academy is the International Telecommunication Union leading platform for capacity development initiatives.
