## Description

Children, or everyone under the age of 18, make up an estimated one in three internet users globally. The digital world provides children with unprecedented opportunities, while also exposing them to online risks and harms that require dedicated efforts to understand and address. Governments, parents and caregivers, educators, civil society, and children and young people themselves all around the world have a role to play in shaping a safe and positive digital environment for children. As the providers of digital products and services, the actions of businesses are also a critical component of these efforts. Every business has a responsibility to respect children's rights in the digital environment and can seize opportunities to support child rights and well-being through their activities. This e-learning training course for industry, developed by the ITU and UNICEF, includes four modules spanning foundational child rights and business issues and knowledge on the digital environment. If your company develops or deploys digital technologies, these modules will support you to better understand how child rights intersect with your company's responsibilities, potential risks and harms for children to think about in your daily operations, and ideas of where to go next on your child rights journey. This training course was developed in collaboration with UNICEF.

## Registration information

[Document on registration information \(English\)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
