Description de la formation

The training course aims at raising awareness and increasing the capacity of ITU members, stakeholders and policy-makers to address the two global megatrends of population ageing and the exponential rise in digital technologies. Through its three modules the training provides holistic information and guidelines on digital inclusion tailored to the challenges faced by older persons. The training aims at supporting all stakeholders' efforts to ensure that older persons are equally and equitably empowered by new technologies and so can actively participate in the digital society, economy and environment. To enable everyone to have access to this training knowledge the content is so designed to be digitally accessible to everyone including persons with hearing impairment or visual disabilities.
