**Description**

---

---

Network forensics is a subset of digital forensics that deals with network attacks and their investigation. In the era of network attacks and malware threats, it's now more important than ever to have the skills required to investigate network attacks and vulnerabilities. Network Forensics starts with the core concepts like coding, networking, forensics tools, and methodologies for forensic investigations. We will also explore the tools used for network forensics, followed by understanding how to apply those tools to a PCAP file and write the accompanying report. By the end of this training, you will have gained hands-on experience of performing forensic analysis tasks.

## Registration information

[Document on registration information \(English\)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
