Description

The course explains the foundational concepts and components for e-governance interaction in information society. It starts with an introduction to what information society is and how it has established the environment for e-governance development and digital transformation in the public sector. Then, the main building blocks of e-governance, their aims, initiatives, and enablers are introduced, and how they are related to external subjects and domains. As the nature of the course is interdisciplinary, it entails an intersection of multiple domains by explaining the political, legal, social, economic, and IT variables impacting e-governance implementation. With the generous support of Global Gateway of the European Union, participation is provided free of charge for selected applicants, including accommodation, meals, and other organized activities for a comfortable and immersive learning experience. Participants or their organizations will be responsible for covering their travel expenses to and within Estonia.

Registration information

[Document on registration information (English)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
