Description

Digital technology is becoming important in addressing sustainable development challenges. This course introduces participants to the challenges of digital inclusion, the consequences of digital divides, and the opportunities towards inclusive and equitable digital transformation. The modules focus on digital inclusion, evaluation, and approaches to understanding ICTs and their relationship with development and governance in a changing technology landscape. Participants will receive training on theoretical aspects of digital inclusion, as well as an introduction to tools used to unearth and evaluate these gaps. Through applications related to low- and middle-income countries, participants will be introduced to models of technology acceptance and diffusion, and inclusive design in technology-based solutions to global social challenges. With the generous support of the Global Gateway initiative of the European Union, this course is offered for free for selected parti cipants.

Registration information

[Document on registration information (English)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
