Training description

This e-learning training course on GovStack Identity Building Block Specifications offers a detailed look into the principles, technical specifications, and practical strategies for developing digital identity systems in government settings. Participants will learn about key protocols, standards, and best practices, and explore real-world use cases that improve service delivery and citizen interaction. The course also covers essential security and privacy considerations to ensure compliance with international standards and provides insights into future trends in digital identity. Through interactive modules and practical examples, participants will gain the knowledge and skills needed to effectively design, implement, and manage digital identity systems in the public sector.

For more information about the training objectives, target population, entry requirements, methodology, evaluation and content, consult the page [here](#).

How to register

In order to register for the training, participants should:

1. Create an ITU Academy account [here](#)
2. Register for the course [here](#)

The [ITU Academy](#) is the International Telecommunication Union leading platform for capacity development initiatives.
