Description

This course provides an introduction to artificial intelligence (AI), focusing on its application in the public service. Participants will be guided through the entire process of devising AI-based services in the public sector. Lessons will cover not just the functional aspects of this application but also the

governance and ethical aspects of the process to offer a holistic point of view.

With the generous support of the Global Gateway initiative of the European Union, this course is offered for free for selected participants.

The content of this short course is a reduced version of the AI4Gov Master Programme, formerly supported by the EU and offered by Universidad Politécnica de Madrid and Politecnico di Milano. For more details about the full master's programme and details on how to apply, please visit <https://www.ai4gov-hub.eu/master/#AboutMaster>

Registration information

[Document on registration information \(English\)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
