**Description**

---

---

This 4.5-day training course provides essential steps and guidelines for designing effective cybersecurity exercises, focusing on the practical aspects of information security. During the course, participants will learn how to define objectives, choose appropriate approaches, design network topologies, create realistic scenarios, establish rules, select relevant metrics, and capture valuable lessons.

The program also emphasizes developing cyber disaster response simulations, enhancing participants' ability to foster collaboration between the public and private sectors. By the end of the course, attendees will gain a deeper understanding of cyber-attacks and strategies for protecting and defending critical information infrastructures. These skills will enable participants to plan better, implement, and follow up on cyber disaster responses.

With generous support from the Global Gateway initiative of the European Union, participation in this training programme is free of charge for selected applicants. This includes accommodation, meals, and other planned learning activities during the training. Participants or their organizations are responsible for covering their travel expenses and visa application costs for Mauritius if needed.

## **Financial support available**

## **Registration information**

[Document on registration information \(English\)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
