## Event organizer(s)

## Description

This course covers strategic aspects of Internet governance and innovations, including technical, business and regulatory aspects. It covers the convergence of telecommunications to all-IP, including open Internet used for OTT services and NGN used by telecoms. Such convergence is driven by the development of fixed and mobile broadband (cable, optical, 5G), based on standards. In that way the course further covers broadband strategies and innovations as well as telecom standardization and policy. The open Internet allows speedy innovations in networks and services, especially by large OTT providers, hence the course includes innovation management in ICT and Google vs. Apple innovation models. Further, it includes business and regulatory aspects of VoIP and IPTV services for telecom operators (IMS-based) and for OTT providers. The digital transformation based on the broadband Internet increases the importance of online security and use of data, so the course also covers cybersecurity and data governance including blockchain and quantum computing security. It also includes cloud and edge computing, the Internet of Things (IoT) and Artificial Intelligence (AI) along with the new Metaverse in terms of innovation and governance. Finally, the course includes network neutrality and QoS for open Internet as well as future approaches for global Internet governance including emerging technologies such as AI, data and crypto, as well as policy and regulatory aspects.

## Registration information

[Document on registration information \(English\)](#)

---

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
