Description

The implementation of the UN cyber norms requires adjusting or establishing policies, procedures, regulations or capabilities or ado pting other measures which support state and national adherence to the projected conditions of the recommendations for norms. By improving national cybersecurity, countries will be better able and willing to work with other countries to improve cybersecurity regional and globally. This course will explore how more effective norms development and Confidence-Building Measures (CBMs) implementation can be achieved by carefully assessing the pros and cons of various venues and formats as well as taking advantage of existing synergies between UN initiatives and regional CBM and capacity-building initiatives.

Registration information

[Document on registration information (English)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse

backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
