Description

The online IoT course applied in rural areas is a comprehensive program focused on understanding and implementing Internet of Things solutions in the agricultural context. Participants will be introduced to the fundamental principles of IoT and explore its potential via data collection, device connectivity, and sensor application for optimizing agricultural processes. Delving into communication protocols, participants will be empowered to develop and deploy intelligent systems for agricultural monitoring, crop management, asset tracking, and remote operation control, aiming to increase efficiency and productivity in the rural environment.

Registration information

[Document on registration information (English)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from

developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
