Training description

This self-paced training course offers a comprehensive introduction to the Consent Building Block, designed for individuals involved in advancing digital transformation and promoting user-centric data privacy in government services. Focused on the principles of secure, transparent, and user-controlled data sharing, the course highlights the vital role of consent mechanisms in enabling privacy-preserving, citizen-centric digital services within digital public infrastructure (DPI).

Through 7 interactive modules, participants explore key concepts, tools, and practical methodologies needed to design, implement, and manage the Consent Building Block. The course emphasizes the importance of informed consent, user data control, and data privacy.

Participants will develop essential skills to integrate consent mechanisms into cross-government services, enabling individuals to manage and control how their data is shared and accessed. Learners will also gain insights into data protection laws, compliance with global privacy standards,

and secure data exchange protocols, which are crucial for safeguarding user privacy and promoting trust in digital ecosystems.

By mastering the core principles of the Consent Building Block, participants are empowered to drive privacy-first digital transformation and build transparent, secure, and people-centric consent systems. This course supports the realization of sustainable, accessible, and privacy-respecting digital ecosystems, promoting the achievement of the UN Sustainable Development Goals (SDGs), particularly those related to privacy rights, digital inclusion, and responsible governance.

For more information about the training objectives, target population, entry requirements, methodology, evaluation and content, consult the page here.

How to register

In order to register for the training, participants should:

1. Create an ITU Academy account here
2. Register for the course here
