## **Event organizer(s)**

## **Description**

This hands-on training program is designed to equip attendees participants from least developed countries (LDCs) and Small Islands Developing States (SIDS) with practical analysis skills using MISP, one of the most widely adopted Threat Intelligence Platforms (TIP) in the field. MISP is a robust, open-source platform that organizations can use to store, share, and receive information about malware, threats, and vulnerabilities in a structured manner. Training will be delivered under the Cyber for Good project.

Participants will engage in discussions about the reasoning behind various CTI analysis tasks and explore real-world scenarios to understand how responder teams effectively leverage CTI through MISP. With a focus on intelligence sharing, including contributions to TIP, students will acquire critical knowledge about what information can be shared, the appropriate methods for sharing, and the right recipients, all tailored to specific objectives.

They will also learn how to extract valuable insights from intelligence feeds, develop strategic questions, create effective queries, and share intelligence to maximize organizational benefits.

Access to the MISP platform will be provided, allowing participants to practice and complete homework assignments designed to reinforce their learning.

Registration information
Document on registration information (English)
Unless specified otherwise, all ITU Academy training courses are open to all interested professionals irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
