Training code: 25OS500263MUL-E-D
Contact: queenie.tam@undp.org

Training description

Data is crucial in policymaking, public service delivery, and development, informing decisions regarding program design, resource allocation, and the evaluation of interventions. Data can also promote transparency, accountability, and public trust if managed appropriately.

This course introduces the importance of data in public sector organizations, the concept and key elements of data governance, and how good data governance can drive inclusive deployment of artificial intelligence (AI) systems and digital public infrastructure (DPI). It aims to correct common misconceptions about data, highlight the benefits of a data-driven culture in organizations, and provide insights into what effective data governance looks like. The course will allow public sector professionals to understand the data governance process in public organizations and how they can contribute to implementing data governance strategies to achieve impactful outcomes.

For more information about the training objectives, target population, entry requirements,

methodology, evaluation and content, consult the page here.

How to register

In order to register for the training, participants should:

1. Create an ITU Academy account here
2. Register for the course here

The ITU Academy is the International Telecommunication Union leading platform for capacity development initiatives.

International Telecommunication Union
Place des Nations, 1211 Geneva 20
