Description

This training is designed to equip professionals from Least Developed Countries (LDCs) with the skills and strategies needed to effectively prepare for, respond to, and recover from cyber incidents. This course covers the entire lifecycle of a cyber crisis—from identifying vulnerabilities and managing real-time attacks to post-incident recovery and legal implications. Participants will engage in hands-on simulations of real-world cyberattacks which will help them to develop quick decision-making and strategic thinking under pressure.

The course focuses on developing practical skills to handle high-pressure situations, emphasizing structured decision-making and clear communication during incidents. Participants will learn to design and implement incident response plans, assess vulnerabilities, and understand the implications of cyber threats on organizational operations.

Training will be delivered under the Cyber for Good project.

Registration information

[Document on registration information (English)](#)

Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
