## Description

This interdisciplinary course is designed for policy makers and regulators who want to develop a critical understanding of digital trade regulations across the globe. The rise of digital trade, which covers trade in digital goods, trade in online services, investment in sectors relevant for the digital economy, and movement of data, is a new reality that our societies are adjusting to. Digital technologies create new services and ways of working, which impact citizens, businesses and governments. Regulating the digital revolution is proving exceptionally challenging, given also the pace at which it is evolving. On one hand, policymakers are trying to apply current policies designed for an 'offline' world to the new online world. On the other hand, they are designing new policies to consider broad economic and non-economic concerns, including, law enforcement, national security, and privacy.

The course will shed light on these issues by introducing the concept of digital trade and related regulations, highlighting the importance of informed policy-making decisions, including in the context

of the recent negotiations of trade agreements.
With the generous support of the Global Gateway initiative of the European Union, participation in this training is provided free of charge for selected applicants.
Registration information
Document on registration information (English)
Unless specified otherwise, all ITU Academy training courses are open to all interested professionals, irrespective of their race, ethnicity, age, gender, religion, economic status and other diverse backgrounds. We strongly encourage registrations from female participants, and participants from developing countries. This includes least developed countries, small island developing states and landlocked developing countries.
