Training description

This 36-hour course is designed for policymakers, government officials, regulators, and ICT professionals eager to leverage emerging technologies to enhance service delivery, operational efficiency, and governance. The course focuses on satellite connectivity as a solution to bridge the digital divide and promote sustainable development.

While there will be a technical component, the main goal is to provide participants with a comprehensive understanding of satellite access technologies, including LEO, MEO, and GEO satellites, as well as their applications, regulatory frameworks, and policies on a global scale. By the end of the course, participants will have gained both the technical knowledge and strategic insight required to assess, plan, and implement satellite-based solutions in their countries. They will be equipped to improve internet access and enhance digital service delivery through satellite connectivity in line with global policies and regulations.

With the generous support of the Global Gateway initiative of the European Union, participation in this training is provided free of charge for selected applicants, including accommodation, meals, and other organized activities. Participants or their organizations will be responsible for covering their travel expenses to São Paulo, Brazil and if needed visa application costs.

For more information about the training objectives, target population, entry requirements, methodology, evaluation and content, consult the page <u>here</u>.

How to apply

In order to register for the training, applicants should:

- 1. Create an ITU Academy account here
- 2. Apply for the course here
- 3. The selection of participants for the course will be made by the course coordinators, based on the course's entry requirements, selection criteria and available number of seats. If selected, you will receive a notification by email.

The <u>ITU Academy</u> is the International Telecommunication Union leading platform for capacity development initiatives.
