Dates: Open
Training fees: $0.00
Language: English
Registration deadline:
Training code: 25OS500384MUL-E-D
Contact: ayush.shukla@itu.int

Training description

This self-paced training course offers a comprehensive introduction to GovStack and its Building Blocks, designed for professionals engaged in advancing digital government services and digital public infrastructure (DPI). The course focuses on the principles of modular, interoperable, and citizen-centric service design, highlighting the role of GovStack in enabling governments to deliver secure, efficient, and user-focused digital services.

Through 4 structured units, participants will explore key concepts, tools, and real-world applications of GovStack. The course begins with an overview of GovStack's mission, vision, and advisory framework, then introduces its approach to digital government transformation and the use of reusable Building Blocks. Learners will also gain insights into GovStack's whole-of-government approach and digital public infrastructure (DPI), as well as examine the specifications, testing frameworks, and tools offered by GovStack.

The training places particular emphasis on practical case studies, showcasing how exemplar digital government services have been successfully built using GovStack Building Blocks across different countries and regions. Participants will learn how GovStack enables governments to adopt scalable, interoperable, and sustainable digital solutions.

By completing this course, participants will develop essential knowledge and skills to design, implement, and manage government services powered by GovStack. They will gain the ability to apply GovStack methodologies in their own contexts, supporting whole-of-government approaches, fostering digital inclusion, and contributing to the achievement of the UN Sustainable Development Goals (SDGs), particularly those related to innovation, governance, and inclusive digital transformation.

For more information about the training objectives, target population, entry requirements, methodology, evaluation and content, consult the page here.

How to register

In order to register for the training, participants should:

1. Create an ITU Academy account here
2. Register for the course here
