Training description

This online self-paced course introduces participants to the fundamentals of Artificial Intelligence (AI) governance through five structured modules. Each module blends clear explanations of key AI concepts with practical, real-world scenarios to illustrate how AI impacts daily life, public services, and global policy. Learners will explore topics ranging from the basics of AI to issues of bias, transparency, data governance, regulatory models, and ethics (fairness, inclusivity, transparency, accountability, human oversight). Designed for non-technical audiences, the course equips policymakers, professionals, and civil society actors with the knowledge needed to critically assess AI systems and engage in governance discussions.

Each module can be undertaken separately with an ITU Academy badge awarded for successful completion. Completing all modules and the final test will bring additional ITU Academy badge.

For more information about the training objectives, target population, entry requirements, methodology, evaluation and content, consult the page here.

How to register

In order to register for the training, participants should:

1. Create an ITU Academy account here
2. Register for the course here
