Designing interoperable digital government services in Kiribati and Tuvalu

Organized by:

Training details

Modality: Online instructor led

Dates: 19 Jun 2026 - 06 Jul 2026

Training fees: \$0.00

Language: English

Application deadline: 18 Jun 2026

Training code: 26OI500558ASP-E-D

Contact: ashish.narayan@itu.int

Training description

This course builds your understanding of how digital government works in practice, from global standards to the realities of implementation in South Asia. Participants will explore a whole-of-government approach to digital transformation, learning how governments design enterprise architecture and why a building blocks model makes that process more efficient and sustainable. Real case studies ground the learning in concrete experience, showing both what works and what obstacles agencies face when putting a digital government framework into action. The training will help understand the inter dependencies and improvements in policy, process, provisioning (infra) and practice (human capacity building) that are necessary for successful digital government transformation. By the end, you will be able to apply the whole-of-government approach, work with Digital Public Infrastructure (DPI) through GovStack, and develop enterprise architecture that places citizens at the centre of digital services.

For more information about the training objectives, target population, entry requirements, methodology, evaluation and content, consult the page [here](#).

How to apply

In order to register for the training, applicants should:

1. Create an ITU Academy account [here](#)
2. Apply for the course [here](#)
3. The selection of participants for the course will be made by the course coordinators, based on the course's entry requirements, selection criteria and available number of seats. If selected, you will receive a notification by email.

The [ITU Academy](#) is the International Telecommunication Union leading platform for capacity development initiatives.
