Training description

This self-paced online course introduces policy experimentation as a structured, evidence-informed approach to testing new policies, regulations, and emerging technologies, services, and business models, before they are scaled.

Across eight concise modules, learners explore what policy experimentation is and why it matters in contexts of uncertainty and rapid change. They build a foundational understanding of how it supports more adaptive, evidence-informed policymaking, while distinguishing it from traditional approaches and regulatory sandboxing. The course also unpacks the core principles, concepts, and stages that shape effective experimentation processes, and examines how these approaches can be applied to explore innovation, inform policy and regulatory choices, and advance public value.

Designed for policymakers, regulators, innovation agencies, development practitioners, and ecosystem actors, the course requires no prior experience and supports a shared understanding across sectors.

For more information about the training objectives, target population, entry requirements, methodology, evaluation and content, consult the page here.

How to register

In order to register for the training, participants should:

1. Create an ITU Academy account here
2. Register for the course here

The ITU Academy is the International Telecommunication Union leading platform for capacity development initiatives.
