Hands-On Spectrum Management Training Using Real Regulatory Tools

- Applied in EG-ATRC in-person training programs on Spectrum Management for regulators and ICT professionals, delivered within the NTRA premises.
- Traditional spectrum management training focuses mainly on theory, with limited practical exposure.
- The program combines theory with hands-on practice using real spectrum monitoring equipment and real data, guided by regulatory experts.
- It connects theory with real practice, which helps participants learn better and stay highly satisfied.
- The approach depends on physical presence and specialized equipment, limiting the number of participants.
- Collaborate with the national regulator, start small, ensure proper supervision, and scale gradually.
